main.c

Share

Run

```c
#include <stdio.h>
#include <stdlib.h>

struct Node {
    int data;
    struct Node* left;
    struct Node* right;
};

struct Node* create(int x) {
    struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
    newNode->data = x;
    newNode->left = newNode->right = NULL;
    return newNode;
}

void find_grandchildren(struct Node* root, int val) {
    if (root == NULL) return;

    if (root->data == val) {
        if (root->left) {
            if (root->left->left)
                printf("%d ", root->left->left->data);
            if (root->left->right)
                printf("%d ", root->left->right->data);
        }
```

Output

```
Grandchildren: 2 7
